Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-19, drawn to a graphical user interface to manage and alter a transactional database, classified in class 345, subclass 810.
 - II. Claim 20-23, drawn to the implementation of a plurality of linked databases, classified in class 707, subclass 10.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the graphical user interface does not require the database implementation as described in claims 20-23. The first set of claims could be used as an interface to many database systems. The subcombination has separate utility such as the design and implementation of a database structure without any relationship to the user's interaction with that structure.
